SECURITY CONFIGURATION ASSESSMENT

Activebytes approach to Secure Configuration Assessment is Based on proven methodology and industry-leading practices and compliance standards. Misconfigured assets and networks can easily pose a risk to your business and serve as attacking ground for attackers. The way to secure a system is by reducing its vulnerability surface. We achieve this through configuration assessment of your IT assets security hardening and configuration assessment through audit .

Our approach

Methodology

Operating System & Network

- Security of File system
- Account policy
- Network settings & Access control
- Logging & auditing
- Updates & patches

Database

- Password policy
- Account privileges
- Files & directories permission
- Auditing
- Account authentication

Our final report will contain

- Report on the current configuration and network functionality
- High-level description of recommended design architecture changes (if any)
- High-level description of a prioritized recommended action plan

Benefits

- Facilitates proactive correction of misconfiguration
- Enhance system reliability and service quality
