

Datasheet

SECURITY ADVISORY SERVICES

ActiveBytes security advisory team will review the organization's current infrastructure, architecture, design and analyze the gaps and provide recommendations. This will provide the right advice on any attack attempts or even new zero days that show up and also do necessary security patching. With the highly customized service, our experts will help your business to develop a smart cyber security preparedness and resilience capability and generate high level of awareness among the team. With our assessment and reports, your business assets will be covered by a mature security posture
